Executive Summary

Product Optimization & Revenue Contribution Analysis - Afficionado Coffee Roasters

Prepared by: Kehkasha Ansari, Business Analyst Intern, Unified Mentor Pvt. Ltd.
Reporting Period: Calendar Year 2025

Purpose of This Report

This summary presents the key findings from a data-driven review of Afficionado Coffee Roasters' product sales across its three stores. The goal is to give stakeholders a clear, non-technical picture of which products drive the business, where the biggest opportunities and risks sit, and what actions are worth prioritizing. It is intended as a plain-language companion to the full research paper and the interactive dashboard, both of which contain the underlying detail.

Snapshot at a Glance

Metric	Value
Total Revenue Analyzed	$698,812.33
Total Units Sold	214,470
Total Transactions	149,116
Products Tracked	80 SKUs across 9 categories
Store Locations	3 (Lower Manhattan, Hell's Kitchen, Astoria)
Reporting Period	Full Year 2025

What the Data Shows

- **A small number of products carry most of the business.** Just 11 of the 29 product types generate 80% of all revenue, and the top 10 products alone account for nearly 79% of revenue. Coffee and Tea, as categories, together make up two-thirds of total revenue.
- **Barista Espresso is the single most valuable product.** It generates the highest total revenue of any item on the menu ($91,406), even though Brewed Chai Tea actually sells in slightly higher quantity - a reminder that popularity and revenue impact are not always the same thing.
- **A consistent group of products underperforms.** Items such as Green Beans, House Blend Beans, and select merchandise sell in very low volumes year-round and contribute minimally to revenue, despite occupying menu space and inventory resources.

Recommendations

- **1. Safeguard the hero products first.** Prioritize consistent stock and quality for the top 10-11 revenue-driving products, since they carry the majority of the business.
- **2. Rethink the long tail.** Review consistently low-performing products for bundling, repricing, or removal to simplify operations without meaningfully affecting revenue.

- **3. Use per-unit revenue, not just volume, when making pricing calls.** Some lower-volume products (like Premium Beans) earn significantly more per unit sold, pointing to pricing and positioning opportunities beyond just "sell more."

Closing Note

Overall, the data points to a business that is concentrated around a defined set of products rather than spread evenly across the menu. That concentration is not a weakness in itself - it's simply where the leverage is. Acting on it - protecting the hero products and reviewing the long tail - offers a clear, low-risk starting point for improving margins without requiring a menu overhaul.
